Signature Assignment: EDUI 6350 Technology Case Study Report

Instructional Protocol

Students will learn how to study and examine an innovative technology implementation project in an institution. Students will choose and provide an introduction to the innovative technology implementation project and should then be able to evaluate issues, advantages, and disadvantages, and implication of the technology project effectively.

The technology case study evaluation should be between five- and six-pages in font that is 12point type. Line should be double-spaced. Students may use tables, charts, or photos to display their data. The procedure for students to follow is described below:

I. Identify an institution which is implementing or has been implemented an innovative technology project. The institution can be a school, a school district, a non-profit organization, a business company, and so on.

II. In the technology case study report, students need to include:

1) The background information of the technology project. The background information should consist of the following four elements:
   a. When does the project start?
   b. How is the project initiated?
   c. Who is in charge of the project?
   d. Purpose or philosophy of the project

2) A specific description of the project. The specific description and discussion should include:
   a. What technology is involved?
   b. How is the technology used?
   c. Lengths of the project.
   d. Issues involved in the project

3) A discussion, conclusion, and implication of the project:
   a. Advantages of the project
   b. Disadvantage of the project
   c. Your suggestions to improve the project
   d. Implications or conclusions of the project which is a description on whether it is a successful project or not. Why do you think it is successful or why do you think it is not?

How to Submit:

Please post your technology case study report in Taskstream as noted under the directions of posting to a Direct Response Folio (DRF):
